

Count on it.

Intelli-Sense™

Just What Your Landscape Needs

The Right Amount of Water at the Right Time

Ordinary irrigation systems cannot adjust to changing weather conditions. They generally over-water your landscape, leaving you with high water bills and expensive property damage.

The Intelli-Sense controller with WeatherTRAK® smart water management solutions is different. All Intelli-Sense controllers come complete with our revolutionary ET Everywhere™ service. Just enter basic information about your landscape and the service takes over from there. Only Intelli-Sense controllers are supported by the industry's leading customer service team.

Drawing on information delivered wirelessly from more than 14,000 weather stations, the WeatherTRAK ET Everywhere service automatically schedules irrigation based on individual landscape needs and local weather conditions. The result is higher property values, lower water bills and a healthier environment.

Saving Water Has Never Been Easier!

Save Water

Independent studies show that Intelli-Sense can save 40 gallons or more of water per day, per household, by accurately determining water requirements by zone and adjusting watering schedules daily.

Save Time

Intelli-Sense takes the guesswork out of establishing a watering program and eliminates adjustments for weather changes.

Save Money

Intelli-Sense reduces maintenance costs and lowers water bills. Ongoing average water savings is 26%.

Intelli-Sense uses WeatherTRAK® scheduling software to automatically calculate the optimum irrigation schedule—based on a series of self-prompting questions answered upon installation*.

SET SPRINKLERS STA 01
Mixed Rotors

SET SOIL TYPE STA 01
Clay Loam

SET PLANT TYPE STA 01
Warm Season Grass

* Variables include:

- Sprinkler type
- Plant type
- Precipitation rate
- Root depth
- Efficiency rate
- Micro climate
- Soil type
- Slope factor

Every day, site-specific information is gathered from weather stations, transmitted through satellites and delivered via ET Everywhere™ to the Intelli-Sense controller.

WeatherTRAK® Technology

1 Across the US each day, a vast network of weather stations transmit weather data to the NOAA satellite

2 WeatherTRAK collects specific data from the satellite and numerous other weather-tracking sources.

3 This information is then analyzed and converted to location-specific evapotranspiration (ET) data (accurate to one square kilometer) and transmitted to the WeatherTRAK wireless network.

4 Current ET data is then broadcast to Intelli-Sense controllers (with ET Everywhere service enabled) and adjusts irrigation schedules accordingly.

Based on the daily updates, irrigation schedules are updated automatically to ensure precise water amounts are delivered—every time.
